

# Repair Restore & Maintain Your Pool With Professional Quality

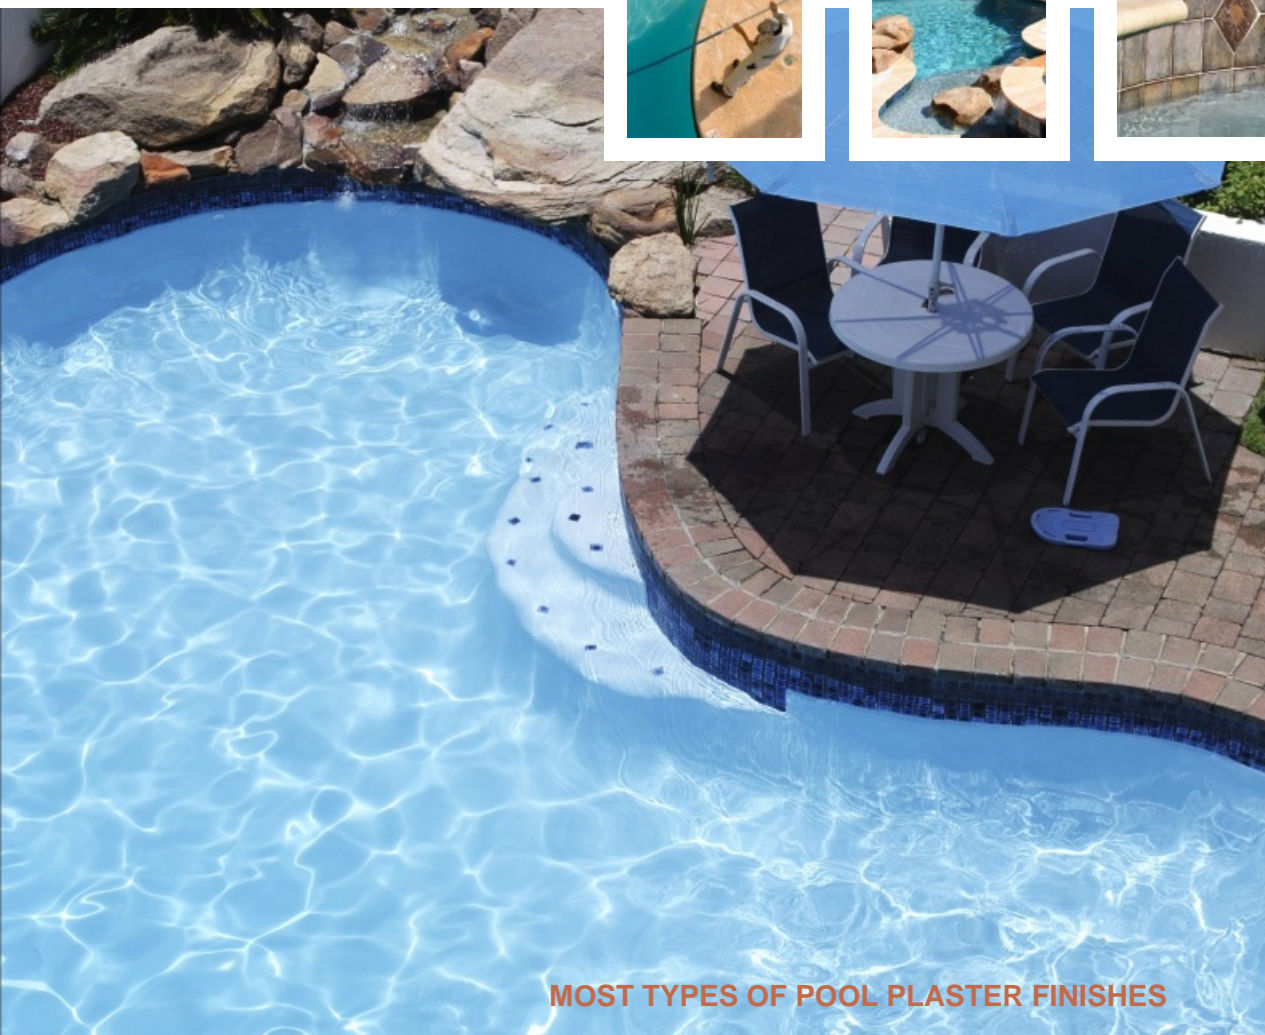

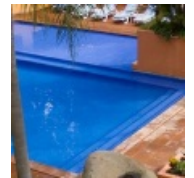

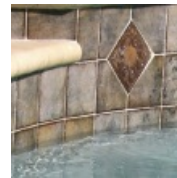

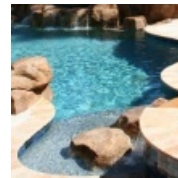

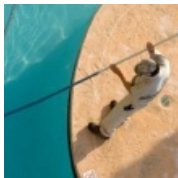

**E-Z PATCH** Kits

From E-Z Products

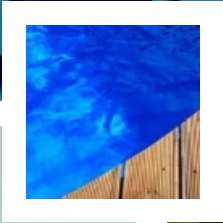

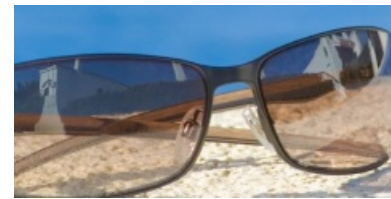

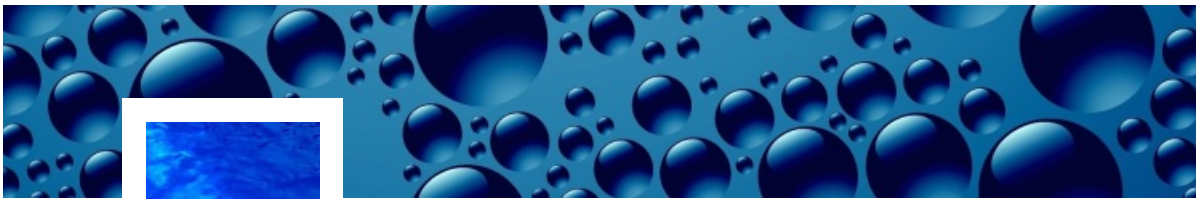

*"NO PROBLEM TOO DIFFICULT!"*

PREFERRED BY POOL DECK AND PATIO SPECIALISTS NATIONWIDE

protect your investment with long lasting, good looking, easy to use products

MOST TYPES OF POOL PLASTER FINISHES

Vinyl Liner Repair

Keeping your pool looking great has never been easier. Whatever your project, pool deck, patio, tile, grout or pool interior, there's an E-Z Patch product to get the job done right with lasting results.

Simulated Flagstone

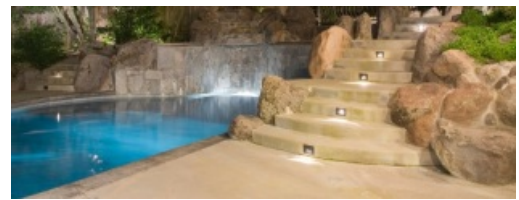

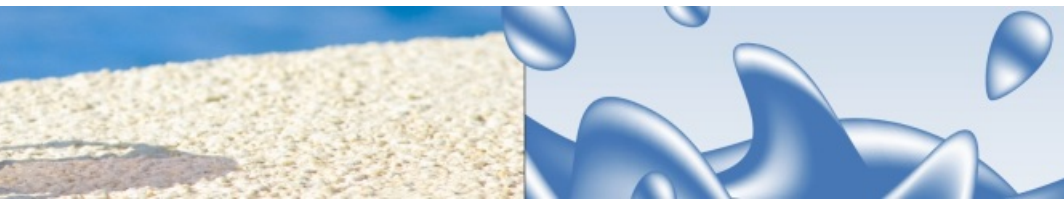

Ground movement usually causes the need for **tile or grout repairs**. Cement type repair supplies such as our E-Z Patch 3,4 & 4F.S. are acceptable to repair problems that are not due to ground movement, or for quick underwater repairs. To properly repair damaged tile or grout due to ground movement or shifting, flexible Neutral Cure silicone rubber should be used. Unlike Acetoxy (acid based) silicone rubber found in competing products, our Neutral Cure formula of silicone rubber bonds well to masonry, fiberglass, metal, etc. Our products, E-Z Patch 20 & E-Z Patch 22, have a 30 year life expectancy. They are formulated to be used as a tile setting adhesive and a tile grout all in one. Available in a cement grout matching off-white or clear color.

For years, **expansion joint** rubber formulas (self-leveling and step grade) have had problems. Slow to cure, complicated to apply and a short shelf life. In response, we've developed a special formula of neutral cure silicone rubber in both self-leveling *E-Z Patch 23* and step grade *E-Z Patch 25* versions. Now you can address joint problems with a product that cures quickly, has a 50 year life expectancy, 2 year shelf life, requires no mixing or primer and can be used down to 0°F.

**Repairing cracks in plaster and decks lasts longer** using a flexible repair. Our Liquid Elastomeric Crack Preventer *E-Z Patch 24* can be applied over any repaired crack to give a flexible repair to the cracked area prior to retexturing deck, replastering, painting or coating.

**"NO PROBLEM TOO DIFFICULT!"**

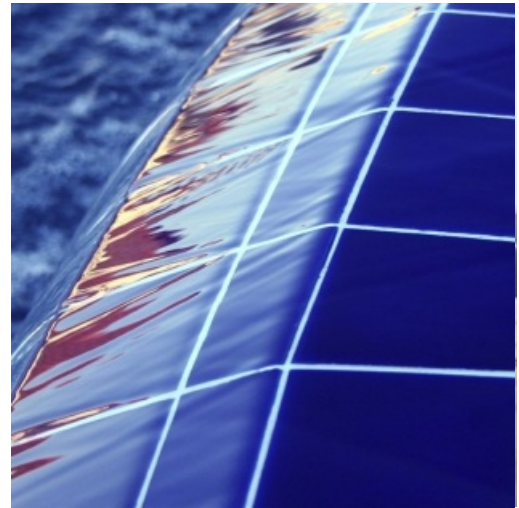

**POOL INTERIORS** From traditional plaster, to today's quartz and pebble finishes E-Z Patch has the right product & color for your pool.

**POOL TILE AND GROUT** Eliminate tile and grout issues with E-Z Patch. Our large selection of applications and colors gets the job done right.

**POOL DECKS AND PATIOS** Count on E-Z Patch to keep your deck and patio in top shape. Color coatings, non-skid coatings, crack repair, Saltillo tile repair and more are all available in our product line-up.

**FULL PRODUCT LISTINGS - FAQ's - TRAINING VIDEOS** One of the most important factors, in successful project outcome, is the proper use and application of our products. With this in mind, we have assembled a comprehensive library of FREE training videos. First time users or seasoned professional, our videos can guide you through the process. Simply visit us on the web at [www.e-zpatch.com](http://www.e-zpatch.com) for full access.

## pooldeck & patio

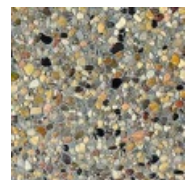

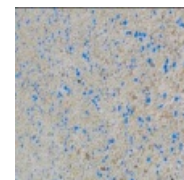

Pool decking, plaster, tile, etc. have many unique problems that cannot be solved with a single "catch-all" product. E-Z Patch has created specific products to repair specific pool damage. For example, old coping stone replacement is time consuming and it is sometimes impossible to find matching stones. We developed a repair kit, E-Z Patch 5, with full instructions to repair coping stones, even if most of the coping stone is missing.

Cantilevered edge pool decks can break off on the underside. That means the repair must be completed against gravity. We developed a repair kit, E-Z Patch 6, with full instructions, that allows you to easily repair cantilevered edges, upside down.

Rebar steel rusts through the pool plaster leaving an unsightly stain when the rebar steel in the pool are not covered with the right amount of gunite or shotcrete cement during new construction. In the past, repairing meant cutting out the steel rebar and carefully cleaning up the metal filings. Often times, the remaining steel would rust through again. To solve this problem, we developed a special formula sealing cement, E-Z Patch 7, that seals so well you'll never have to cut out the old piece of rusted rebar.

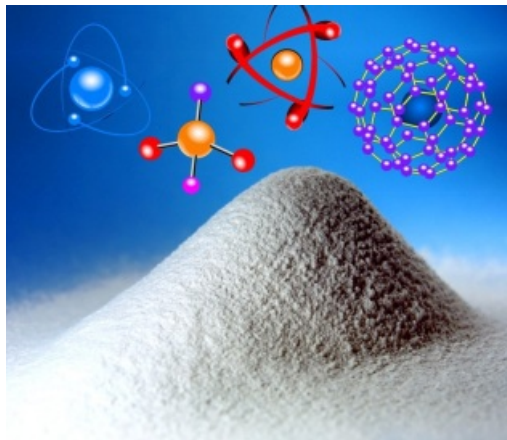

The right size  
for any size project

**Now available, E-Z Patch quality repairs for Pebble-Plaster & Quartz-Plaster finishes.**

Now you can repair and patch the most common pebble & quartz plaster surfaces like a pro. Both kits are designed for above water repairs (water must be lowered). Our special color matched kits and "How to" videos will make it happen. Both kits feature our new special Acrylic modified material with Pozzalans.

# Specialized products get the job done.

E-Z Products is an established leader of innovative products for pool repair and upkeep. Our E-Z Patch brand continues to push the boundaries of technology, developing exciting and innovative repair products for pool and tile applications. E-Z Patch repair and construction materials have earned a reputation for lasting longer, looking better and being easier to work with than competing products.

## Unique Formulations and Materials

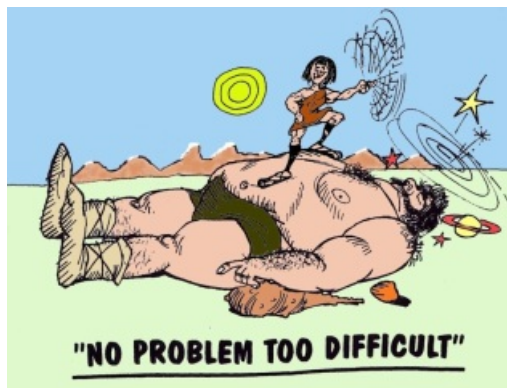

E-Z Patch products use innovative materials (like **Polymers and Pozzalans**) to create unique new products for the pool repair industry. Strict quality standards for purity and chemical formulation produce a superior product you can count on.

## Innovative Products

The knowledge to produce the finest in swimming pool and tile repair and construction supplies is a result of our many years experience installing ceramic tile and performing swimming pool repairs and renovations with our own crews. We believe that no single competitor offers more problem specific solutions than the E-Z Patch brand.

## No Problem Too Difficult

We are constantly endeavoring to produce new and better products. At E-Z PRODUCTS we believe that you - the repair person and the pool/home owner - deserve the best!

Our special chemicals, formulas and compounds allow you tackle the toughest jobs with confidence
